

Learning Guide Unit 8

Overview

UNIT 8: Security Features in Server-Side Programming

Topics:

- Common security vulnerabilities: SQL injection, XSS, and CSRF
 - Techniques for securing PHP applications
 - Best practices for API security
-

Learning Objectives:

By the end of this Unit, you will be able to:

1. Identify and mitigate common security risks in web applications
2. Explain how to secure PHP applications by applying encryption techniques and using prepared statements to prevent SQL injection.
3. Analyze how to implement API security using validation techniques to ensure data integrity and prevent common security vulnerabilities.
